Low-Dose CT

*Introducing new
state-of-the-art CT scanners*

Princeton Radiology

Excellence in Imaging

**Intricate diagnostic detail.
Lower radiation dose.
Better patient experience.**

Excellence in CT Imaging

"Excellence in Imaging" is our promise—and our new, state-of-the-art Siemens SOMATOM Perspective CT scanners are the latest advance. With low dose scanners available in Princeton, Monroe and Mercerville, we're equipped to perform a complete range of body imaging, neuroimaging, oncologic, cardiac imaging, and musculoskeletal CT studies with intricate diagnostic detail.

Significant Dose Reduction for Diagnostic Studies and Screenings

Our new high resolution CT scanners include advanced dose-reduction technology that adjusts to each patient's size, weight, and anatomy. The result is outstanding diagnostic quality with radiation exposure reduced up to 80 percent, making CT an even more attractive diagnostic or screening exam.

Expert Interpretations

Even the most advanced equipment won't produce the best results unless it's in the hands of appropriately trained experts. At Princeton Radiology, you can count on a prompt, accurate report from a physician with subspecialty diagnostic training in the area of anatomy being studied. Our team includes experts in body imaging, neuroimaging, musculoskeletal imaging, cardiovascular imaging, breast imaging, pediatric imaging, nuclear medicine, and general diagnostic radiology. Locally based, they are available to consult with your physician on the optimal exam, equipment, and protocol for you.

Better Patient Experience

"Excellence in Imaging" begins with clinical excellence, but it doesn't end there. Our new CT scanners also advance patient comfort, with:

- Ease of access for most patients, regardless of age or size
- Exams that are often faster with fewer breath holds
- Illumination MoodLight panel provides a more soothing CT scanning environment
- Advanced automation features that enable technologists to obtain the most accurate study, while attending to patients' needs

**Princeton Radiology's Princeton Office—
selected by Siemens Healthcare as
a model site for the new Siemens
SOMATOM Perspective
128-Slice CT Scanner.**
